PROJECTS

- Developing **VU360 Robotic Process Automation** is based on the world's most popular technology that's used to compose observability dashboards with everything from Prometheus & Graphite metrics, to logs and application data to power plants and beehives. The Original Open Source application was Modified to Incorporate Automated Bots that'll perform certain tasks (e.g. Chat Bots), VoIP and Chat. It is a multi-tenant web application.
- Developed **Point of Sale** Application. It is a multi-tenant web application.
- COMO** is a University Management Application. It has online Student Registration, Live Chat and many other collaboration Tools for both students And Teachers. It's been under development for the past few years and is near completion. This Application is being run by 2 Universities and also will replace Schoolink V1 as the primary Application for the remaining universities in the Future.
